

Unlock powerful digital tools:

Save money by maximising the use of renewables and off-peak electricity, while cutting your carbon footprint.

- The **Powervault Portal** provides users with an online platform to monitor current and historical energy consumption and renewable electricity generation. It shows performance information for the Powervault system, with a live view, daily totals and charts for each 24-hour period. The platform also features scheduling tools to take advantage of TOUs.
- Users can also connect to **SmartSTOR**, Powervault's proprietary artificial intelligence energy optimisation system. This automatically sets the best schedule based on energy usage, including projected solar generation.

Portal features and benefits:

- Live power view
- Daily consumption and generation charts to understand usage
- Simple scheduling to work the TOUs
- SmartSTOR energy optimisation access
